### Workshop description

Robotics is a multi-disciplinary subject with roots in electronics , computer science and mechanics. Although it is not taught in schools , a lot of kids still pursue it as a hobby while struggling to find out why something works or does not work. In this workshop we teach kids how to read a circuit diagram , how to identify different electronic components and how to put together components to build a circuit. Since we aim to learn by examples , we build different components of a wireless robot and put them together to watch it come alive.

### Synopsis

- Learn the basics of passive circuit elements with the help of experiments
  - Resistor
  - Capacitor
  - Inductor

- Learn to identify active circuit components
  - Diode
  - Transistor
  - Integrated Circuit
- Learn the symbols and how to read a circuit diagram
- Learn how to use a Multimeter
- Learn How to make a circuit on breadboard
- Learn how to make a circuit on PCB (By Soldering)
- Make a :
  - Encoder
  - 38Khz Oscillator
